```sql
-- 1

-- a
select id, person_name
from works
where company_name = 'BigBank';

-- b
select works.id, works.person_name, employee.city
from works
left join employee
on works.id = employee.id
where works.company_name = 'BigBank';

-- c
select employee.id, employee.person_name, employee.street, employee.city
from employee
left join  works
on employee.id = works.id
where works.salary > 10000;

--d
select employee.id, employee.person_name
from employee
left join company_
where employee.city = company.city;
```

```sql
-- 2

-- a
select id, person_name
from works
where company_name != 'BigBank';
```
